4.2.1: Library is automated using Integrated Library Management System (ILMS)

The library has 1251 square meters built up area. It is centrally air cooled, well furnished, spacious and ventilated with separate reading rooms for boys, girls, staff and PG students with a capacity of 300 readers. It has six sections: Stack Section, Reference Section, Periodical section, SC/ST Book Bank section, E-Library and Reading Room. The library is provided with CCTV Surveillance. It is a rich library with 64196 volumes, 13635 titles, and 2023 back volumes and 2822 SC/ST book volumes along with general library books. The Library also subscribes National and International journals and more than 4000 e-journals. The central library maintains required books for the preparation of competitive exams like GATE, GRE, TOEFL and MPSC/UPSC examinations.

The Central Library had been fully automated using Software for University Libraries (SOUL) Version 2.0, and is in use since 2003-04. The automation is useful to improve and streamline the library operations in a more effective and efficient manner. The Library follows open access system encouraging the user to browse freely in the stack area. One separate node (KIOSK Machine) is made available for Online Public Access Catalogue (OPAC) facility. User can search the library collection by giving Title, Author, and Class Number. New arrivals of books and journals are displayed on separate stands and racks.

The library organizes regular User Orientation Programs for the user's to use the Library Sources and Services, every academic year for newly admitted students.

Integrated Library Management System (ILMS) SOUL 2.0 consists of the different modules; each module further has been divided into sub-modules to cater its functional requirements:

1) Acquisition

This enables library staff to handle all the major functions, such as Suggestions Management; Order Processing, Cancellation and Reminders; Receipt, Payment and Budgetary control; Master files such as Currency, Vendors, Publishers etc.

2) Catalogue

This module is used for retrospective conversion of library resources. It also facilitates library staff to process, the newly acquired library resources.

3) Circulation

This module takes care of all possible functions of circulation, it also cares membership management, maintenance and status of library items, transaction, Inter Library Loan, overdue charges, renewals & reminders, search status and report generation according to the status of the items.

4) OPAC

One of the major attractions of SOUL is its robust On-line Public Access Catalogue (OPAC). The OPAC has simple and advanced search facility with the minimum information for each item including author, title, corporate body, conference name, subject headings, keywords, class number, series name, accession number or combination of any of two or more information regarding the item.

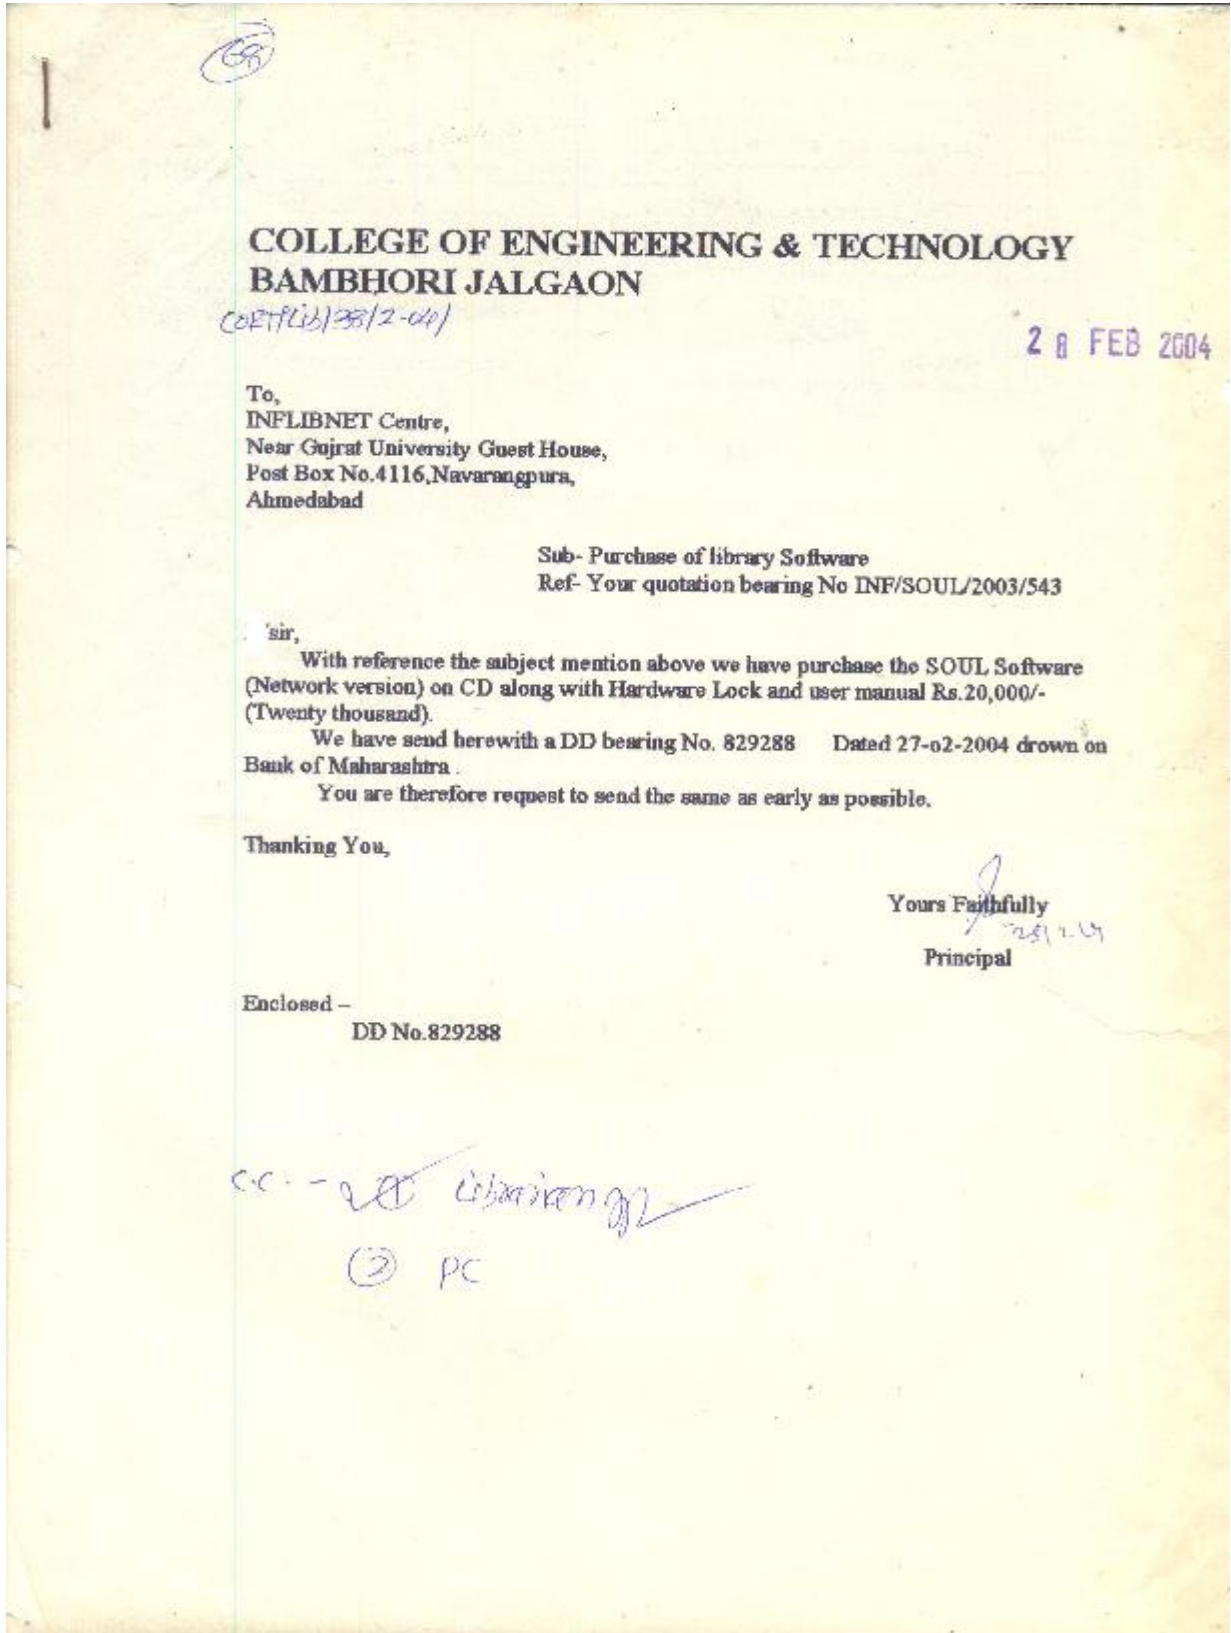

5) Serial Control

Managing serials is the most complicated job for a library. The module keeps track of serials in the library effectively and efficiently.

6) Administration

For accommodating requirements of library staff, the SOUL 2.0 is having additional features such as User Management, System Parameters and Masters which helps to perform ILMS effectively.
