Rain Water Harvesting

SSBT'S College Of Engineering and Technology and
Technology Bambhori Jalgaon.

Rain Water harvesting

Response: Yes

RAIN WATER HARVESTING

- The campus has an area of 25 acres. The bore wells are located in different part of the college and get replenished during the rainy season due to surface runoff.
- Owing to the minimal concrete floor construction in campus, rain water can sufficiently penetrate underground thereby maintaining the natural ground water table. Arrangements are made to collect the roof water during rainy season which can further cater to the water requirement for sanitation.
- The catchment area is very large. The rooftops of big buildings are used to collect this rain water and collected water is used for charging water level of the college campus.
- Drip irrigation system is used for garden in the college to save water. The institute ensures optimum utilization of water by creating awareness about leaky taps and pipes. There is continuous observation of water loss and any leaky from overhead tanks.
